And no, this pamphlet is not printed on hemp. Hemp paper is too expensive at this time.

All information herein was gleaned from the internet with simple google searches.

Restoring America's Infrastructure & Healing the Environment with HEMP

Knowledge is the key to helping our world become a cleaner place to live!

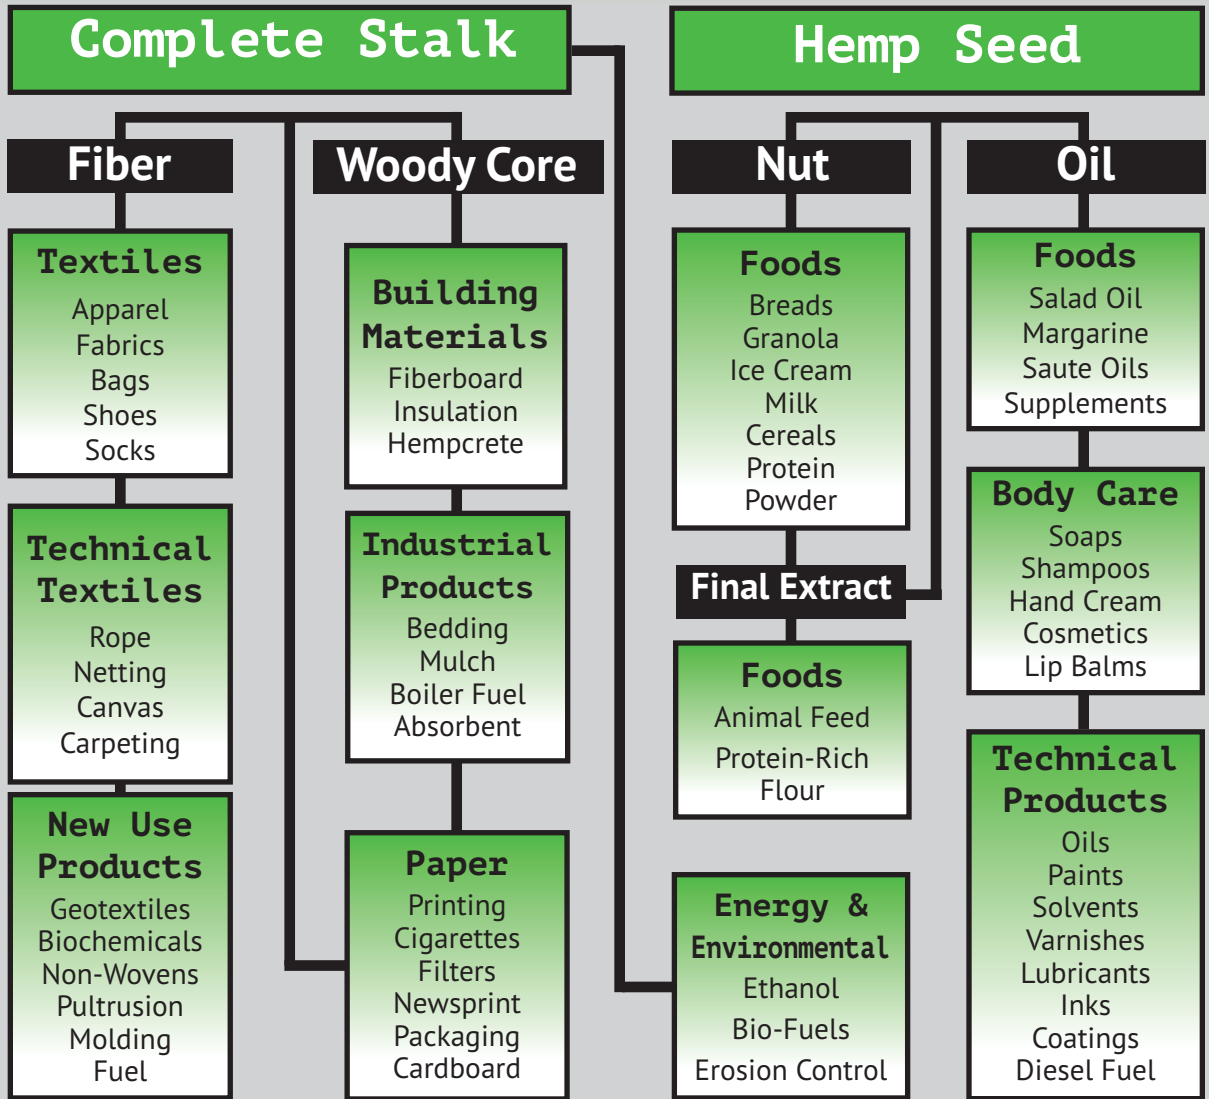

What is Hemp?

The Many Uses for Hemp.

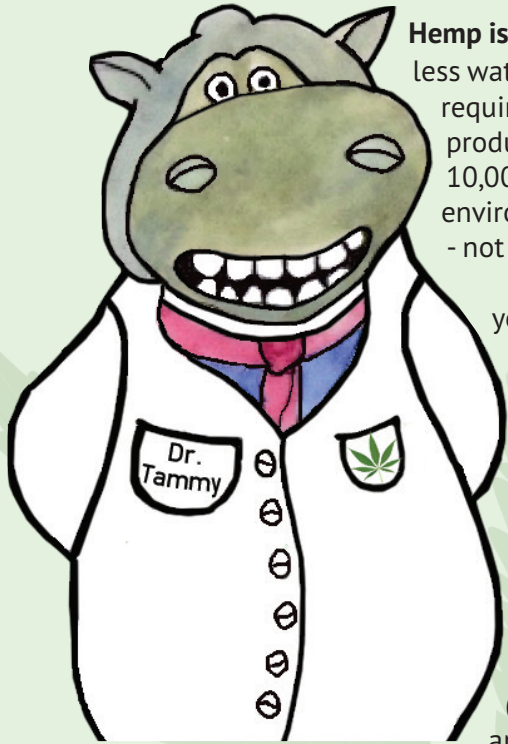

Hemp - It's Time Has Come!

Hemp is not a drug nor is it psycho-active - meaning: it contains less than 0.3% THC (TetraHydroCannabinol). Hemp and marijuana are both cannabis but each are a different variety of the sativa species. Although Hemp looks like marijuana, it contains only fiber and seeds but none of the active chemical (THC) that creates the "high" people experience. The Hemp plant also includes the medicinal ingredient CBD (CannaBiDiol).

USES OF HEMP

HEMP - *It's Time Has Come*

Hemp is a WEED like no other weed. It needs NO pesticides and less water to flourish. Cotton, wheat and corn, on the other hand, require tons of chemicals and 4 times the amount of water to produce a crop consumers will buy. Hemp can replace over 10,000 products - most notably, plastic, which makes Hemp environmentally friendly - and get this.... it comes from a plant - not oil (like plastic).

Like corn, Hemp can be used as a fuel additive ... better yet, the seeds can be converted into bio-diesel fuel. Hemp produces more “woody” material. Homes built with Hemp are fire and mold resistant....and Hemp is easier and faster to produce. Hemp, in many cases, can replace steel, and will not rust. Fabric from Hemp is more durable, comfortable and stronger than many materials today. Because Hemp contains CBD (CannaBiDiol) it has many health benefits. Those suffering with pain and a variety of other symptoms are finding CBD a better and cheaper alternative than pharmaceuticals.

We all know our lakes, streams, rivers and oceans (and that means fish, animals, birds, bugs... and you / us) are suffering, because of chemicals/pesticides used on

most farms. And pollutants (paints, sprays and other contaminants) can be found in most garages across America. It has been found that Hemp can extract nuclear contamination from soil.... a benefit we desperately need with all the nuclear plants scattered about the world. Hemp is completely bio-degradable and thrives without the use of harmful chemicals.

Were we to gradually replace Hemp for steel, Hemp for cotton, Hemp for timber, Hemp for oil, Hemp for pharmaceuticals, not only would it benefit nature, eliminate use of harmful drugs, it would provide jobs to get the country productive again. We can start by learning and talking about Hemp today. Police and courts ... we are all in this together, and time has to be considered. We really need to make Hemp issue number 1 in our communities and protected with our laws. Our infrastructure is ready for revamping, our farm soils need rebuilding, our waters need a good cleansing ... all possible with the use of Hemp.

Please consider sharing this pamphlet and getting involved in your local communities.

***Hemp can replace over
10,000 products -
most notably, plastic,
which makes
Hemp environmentally
friendly - and get this ...
